

Weekly Report

1. Translation

My part of the translation work is done, leaving one subsection about 1-2 pages in terms of Ma. He would be able to finish it before May.

2. Large-display research

XC, HXX and GFZ have completed the research work. We would like to start from a small sample project to practice it in the real environment.

3. VAST Challenge

We're starting from challenge 3, a network description of a company. The dataset is downloaded and loaded into database.

We divide our team into two subgroups. XC and HXX would like to start from certain network patterns, and try to match with existing data. On the other hand, GFZ and I start from the data itself, analyzing the data type and data patterns, and then try to match them with known network patterns.

We hope that our bi-direction methods can meet each other eventually.
